

SNOUT INSTALLATION PHOTOS

12 F SNOUT and Oil Boom in a 2' x 2' inlet structure with an 8" clay outlet pipe with 18" of sump in the structure below pipe invert. This unit functions as an inlet oil-water separator reducing oil, grease, and floatables that are discharged to a pond.

18 F SNOUT is shown with the access port open in a 2' x 4' inlet structure with a 15" CMP outlet and 4' of sump below pipe invert. This unit functions as an oil-water-debris separator trapping floatable debris, trash, oil and grease, and sediment.
